ADHD Prescribing Confirmation

Patient name: _____

Before an ADHD assessment is scheduled for your patient, we want to ensure that as the treating General Practitioner you are prepared to take over prescribing of any required medication when following completion of a 291 assessment.

If a diagnosis of ADHD is confirmed and pharmacotherapy is indicated, our clinicians will provide a detailed treatment plan including medication titration regimes, and you can use their assessment report in support of your application for a local treatment permit.

If you agree to act as the ongoing prescriber for this patient following the management plan, **please sign below and return to info@calltomind.com.au** so that we can proceed with booking the appointment.
